

4. Scope

In Scope

- Real time monitoring of critical aircraft metrics: engine temperature, fuel level, altitude, airspeed, cabin pressure
- Detection of abnormal readings and ability to generate alerts
- Predictive monitoring of sensor trends to identify when a metric is about to become dangerous
- Safety dashboard for pilots that displays all the warnings and alerts
- Event logging of previous sensor readings and alerts
- Weather forecasting

Out of Scope

- Aircraft maintenance and repair
- Air traffic control communication
- Flight planning
- Direct control of the aircraft
